## Experience

### Feb 2018 - Present, JollyBee Apps Private Ltd [Software Engineer]
eKnowledge.com and PowerPrep (SAT/ACT/LSAT)

○ Description : The Project contains several sections: Product website, PowerPrep (provides learning solution to students preparing for SAT/ACT exams in USA) and a Custom Admin Panel to manage the customer accounts for Customer Care Team. I am tasked with maintaining these websites and adding new features according the Clients requirements. I worked on refactoring the code, improving load time and navigation speeds with better code quality.

○ Tools/ Languages/APIs used: JavaScript, PHP, HTML, MySql, AWS

### Oct 2017-Feb 2018, Cerner Heathcare Solutions [Software Engineer]
Single Platform for Multiple Social Media Websites.

○ Description: Project can pull in the feeds from a user's profile for specied time period from various social networking websites like Facebook, Instagram and Twitter.

○ Tools/ Languages/APIs used: JavaScript, HTML, CSS

Patient Registration & Heath Plan Validation

○ Description: Project allows the hospitals to capture the patient information, ability to access and update the patient information for subsequent visits. Authenticated users get access to the system with ability to check for patients heath plan details.

○ Tools/ Languages/APIs used: Java, SWT, MySQL

### March 2017 - Sep 2017, JollyBee Apps Private Ltd [Internship]
eKnowledge.com and PowerPrep (SAT/ACT/LSAT)

○ Description : The Project contains several sections: Product website, PowerPrep (provides learning solution to students preparing for SAT/ACT exams in USA) and a Custom Admin Panel to manage the customer accounts for Customer Care Team. As an intern was tasked with maintaining these websites and adding new features according the Clients requirements.

○ Tools/ Languages/APIs used: JavaScript, PHP, HTML, MySql, AWS

### March 2016 - Oct 2016, Thomson Reuters Corporation [Internship]
Content Analysis and Searching Workflow : SCOUT

○ Description : SCOUT is a proprietary Thomson Reuters application which intends to reduce manual maintenance of Content. SCOUT incorporates a feature called Sandbox which would allow employees to search for expressions in files without manipulating it. It would enable employees to test or analyze software in a protected environment. I was assigned to assist in development and incorporation of this feature in SCOUT.

○ Tools/ Languages/APIs used: C#, WPF
